

Sprint 3

Products and Pricing

Products and pricing rules, automatically managing the innate many-to-many relations

Views

During this sprint, the portal project was set up for development, and two categories were added to the group sidebar:

1. Products
2. Pricing

The following slides show the views that have been implemented

- Dashboard
- Jobs
- Members
- Products
- Pricing

Data Management

1. When a product is created, pricings (pricing, dynamicPricing, fixedPricing) are automatically attached to each rule.
2. When a rule is created, pricings are created for each product.

Reflection - Must Haves

1. Thresholds that are incrementally bigger should be added to each pricing of a rule if the add button is pressed.
2. A threshold of a rule should be deleted for each pricing with the click of a button.
3. An error is sometimes shown when a particular combination of fields is mutated and saved.
4. Display prices in € instead of cents.
5. Test pricing calculation with data inserted by the user.

Reflection - Could Haves

1. Before leave warning, when a user has modified a form.
2. Order rules by precedence automatically.
3. Set precedence by dragging rules up and down.
